Climate and the American Pika

You may have heard a little pika calling at you from an alpine boulder-field, or you may have seen one scampering over the rocks with a mouthful of flowers. And you may have heard that this “little chief hare” is threatened by climate change. Research Associate Christine Ray from CU-Boulder’s Department of Ecology & Evolutionary Biology will explore the nature and conservation status of pikas worldwide, with emphasis on her research of the local species.

Thursday, April 7
7:00 p.m.
